

Mileage and Fuel Tax Overview

The Mileage and Fuel Tax Module (MSWIN) allows you to track actual miles on your trucks (and optionally trailers) along with fuel purchases made in each state aiding with IFTA reporting. As with all of our modules we are known for flexibility. Trips can be manually entered directly into MSWIN or imported from Dispatch (DPWIN) utilizing the Trip Auditor Module (TAWIN). Your fuel purchases can be entered manually, imported from our Fuel Card Module (FCWIN) or imported along with the trip using TAWIN. Again, flexibility!

MSWIN includes extensive reporting and uses Prophesy, PC Miler or Rand McNally for mileage calculation. You may also enter your own mileages. In addition to print or email options on your reports, we also now include a save to CSV option. Please contact your support staff for your update.

If you are using the manual trip entry system we have customizable Templates for your routes that are frequently duplicated to speed up the data entry.
