

## Welcome to TMS Digital Transportation Management Software

This demo will give you an overview of our Dispatch program. It is part of our TMS Digital Suite, but also can be ran as a standalone app.

Our TMS programs are all stored on our hosted servers and are easily accessed, whether from your office, home or even your favorite coffee shop.

Dispatch may be ran as a stand-alone app, which can be accessed, from anywhere you have internet access. We also offer our Full Service option, where we host all of your programs on one of our remote VM servers. Our IT staff will migrate your local data and you can rest assured that your data is now secure and ransomware/malware and virus free!

This also includes MS Office and email. As long as you have internet access, you can work in TMS from your Windows or Mac computer, your tablet, whether it is Apple or Android and even from your phone if you have eagle eyes!

- It is very easy to add a new load by hitting your F4 button. You can also replicate existing loads.
- The Dispatch load screen lets you enter all your key information in one place. For example, your billing information, where you are going to pick-up and deliver to. Fields to enter all the details of where you will pick-up and drop, including dates, times, notes, special instructions and even directions.
- You can have multiple pick-ups and multiple drops.
- You have a section to enter the freight/commodity you are hauling. You can even rate by commodity.
- Reference fields can be user-defined
- You can enter your load's Rating information based on miles, or flat rate, by weight. Built in are several different rating options. Dispatch also includes the option for auto-rating and we can even setup complex billing formulas.
- Additional charges, for example things like detention, layover or tolls can be added to the load or setup to automatically calculate based on the customer. Dispatch also includes a fantastic Fuel Surcharge rating system, by effective date.
- Dispatch lets you do regular truckload, LTL, Split Loads and Cross-dock, as well as deadheads.

You can dispatch to your company drivers, to your owner operators and broker to carriers. You can pre-dispatch your drivers and trucks, which makes planning easy! Dispatch even offers an option to use agents and/or sales people, custom screen, custom pay formulas, custom buttons and custom reports.

Imaging buttons let you tie images of your important documents to the loads, trucks, drivers or carriers. For example, things like proof of delivery documents, truck images and titles and driver images like his driver's license or insurance info.

A Load map button is included. Dispatch can also interface with some of the more popular mileage programs on the market.

It is very easy to bill your loads in our system. Dispatch interfaces with QuickBooks, and includes an accounting link program that will translate your postings into IIF files that you can import into QuickBooks. You just mark the loads you want to invoice, print and post. It is that easy. Invoices can also be customized to either to fit your preprinted form, or we will customize a plain paper invoice, per your specifications.

Dispatch can interface with any accounting package that has the ability to import. This includes not only QuickBooks, but Mas 90 and Microsoft Dynamics as well. Dispatch can be setup to post to multiple companies, for example if you have both a trucking division and a brokerage. We can also track breakdowns of your GL account numbers, for example revenue and expenses, automatically posting the correct debits and credits.

The Dispatch Settlements option allows you to pay your company drivers, owner operators and carriers easily. You just select which loads you want to pay the driver for, add any advances or adjustments to his pay, print a pay sheet and post to your accounting package. Our dispatch also offers custom Settlement sheets and we will automate your complicated pay formulas.

Our Fuel Card program is included. This allows you to import cash advances and Fuel transactions from your cash card company in order to adjust the driver's pay.

We realize how important reports and accurate data are for managing your company. We offer many reports that offer filters to allow you to drill down to the smallest detail.

Dispatch offers a highly complex array of options that can be turned on or off by your TMS support technicians. With over 35 years of programming, we offer a huge variety of options to customize Dispatch to enhance your business and fit all your needs. There are more bells and whistles than I can include in a short video!

Dispatch can interface with multiple APIs, for example: Mileagers, such as Rand McNally, PcMiler or Prophecy and other accounting packages besides QuickBooks, like Mas 90 or Microsoft Dynamics. Dispatch also has an option for EDI interfaces for loads, invoices and load updates. This is just a quick overview of what our Dispatch program can do for you.

If you would like a live demo or have questions, please contact us! We would love to talk to you about what our program can do for you!

Thank you for watching!
